### 3. COMPOSITION/INFORMATION ON INGREDIENTS

Respiratory Syncytial Virus Type B (RSV-B, Strain CH93 (18)-18) is an enveloped Paramyxovirus that contains a helical nucleocapsid and negative-sense, single-stranded linear RNA. Sample is of biological origin and is presented as a liquid in a plastic vial. Each vial contains no more than 1000µg.

Inactivation method: Detergent and heat. Viral inactivation is verified for every lot of lysate by the absence of viral growth in validated tissue culture-based infectivity assays. Respiratory Syncytial Virus is a Biosafety Level 2 organism. Use universal precautions when handling this product. Viral lysate has been treated by a method validated to be effective for virus inactivation. However, no method can be guaranteed 100% effective. This material should be handled as if capable of transmitting infectious agents.

Additional components present: 0.5% Triton X-100 non-ionic detergent/0.6 M KCl
